Voting for Restaurant; :doctype: book :icons: font :source-highlighter: highlightjs :toc: left :toclevels: 4 :sectlinks:

HTTP verbs

Speakers Service tries to adhere as closely as possible to standard HTTP and REST conventions in its use of HTTP verbs.

Verb	Usage
GET	Used to retrieve a resource
POST	Used to create a new resource
PUT	Used to update an existing resource, full updates only
DELETE	Used to delete an existing resource

HTTP status codes

Speakers Service tries to adhere as closely as possible to standard HTTP and REST conventions in its use of HTTP status codes.

Status code	Usage
200 OK	Standard response for successful HTTP requests. The actual response will depend on the request method used. In a GET request, the response will contain an entity corresponding to the requested resource. In a POST request, the response will contain an entity describing or containing the result of the action.
201 Created	The request has been fulfilled and resulted in a new resource being created.
204 No Content	The server successfully processed the request, but is not returning any content.
400 Bad Request	The server cannot or will not process the request due to something that is perceived to be a client error (e.g., malformed request syntax, invalid request message framing, or deceptive request routing).
403 Bad Request	The client does not have access rights to the content; that is, it is unauthorized, so the server is refusing to give the requested resource.

Status code	Usage
404 Not Found	The requested resource could not be found but may be available again in the future. Subsequent requests by the client are permissible.
409 Conflict	The request could not be completed due to a conflict with the current state of the target resource.
422 Unprocessable Entity	Validation error has happened due to processing the posted entity.
